Art Unit: 3629

Applicant's election of 10/19/07 has been entered. Applicant's election without traverse is acknowledged. Applicant has elected to prosecute the invention which includes independent claims 71 and 98. Applicant has stated that claims 1-71 are withdrawn from consideration as being directed to a non-elected invention. Upon a review of the claims it is noted that claims 73-97 and 99,100, ultimately depend from withdrawn claim 71, which is non-elected. This then means that claims 73-97 and 99,100 are withdrawn as well. The only claims remaining to be examined are actually claims 71 and 98, the two independent claims. Because claims 73-97, and 99 and 100 depend from non-elected claims, they are non-elected as well. Only claims 71 and 98 have been examined and claims 1-71,73-97,99,100 are withdrawn.

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 72,98, are rejected under 35 U.S.C. 102(e) as being anticipated by Griner et al. (6917566).

For claims 72,98, Griner discloses an input processor 100, that includes 110,120, and 130. The input processor is fully capable of being connected to a "front house console" to receive an audio signal. Processor 100 is fully capable of this function

Art Unit: 3629

because of the fact that it is designed to receive audio signals. The input processor is disclosed as outputting a processed signal as claimed. See column 5, lines 26-38. The computing device is interpreted to be the editing module 200, which has a hard drive. Processed audio signals are stored as claimed by 200 and it is also fully capable of creating individual segment files as claimed. See column 6, line 63 to column 7, line 5.
